

### Amplifier WG09

Amplifier WG09 is dedicated to work with linear displacement sensor (LVDT). Amplifier feeds sensor and convert its output signal to analog amplifier's signal 0÷10V or 4÷20 mA and also to digit signal in standard RS485 Modbus RTU. The device has calibration keys which enable calibration with any sensor to any measuring range. Additionally amplifier enables internal and external temperature measurement (fe. temp. of LVDT). The device has an rail mounted enclosure DIN 35mm standard.

#### TECHNICAL DATA

|                     |                                |                    |                                    |
|---------------------|--------------------------------|--------------------|------------------------------------|
| Power supply        | 24VDC/24VAC                    | Interface          | RS485 twist, two wires             |
| Current consumption | 100 mA                         | Transmission speed | 9600 ÷ 57600 bps                   |
| Working temperature | -25°C ÷ +40 °C                 | Protocol           | Modbus RTU slave                   |
| Installation        | Rail DIN 35 mm                 | Length             | to 1200 m                          |
| Enclosure           | ABS, green, width 22,5mm       | Memory             | EEPROM                             |
| Dimension           | X:22,5mm; Y:101mm;<br>Z:120mm; | Programmimng       | DIPSwitch: address slave and speed |
| LVDT excitation     | 2 Vrms, 5 kHz                  |                    |                                    |
| LVDT output signal  | 1 Vrms                         |                    |                                    |
| Temperature sensor  | Resistance fe. KTY210          |                    |                                    |
| Output signals      | 4÷20 mA or 0÷10V               |                    |                                    |

Setting configuration parameters:

DIP switches enable slave address and transmission speed setting:

| Slave address    | Transmission speed |
|------------------|--------------------|
| 00000001 xx #1   | xxxxxxxx 00 9600   |
| 00000010 xx #2   | xxxxxxxx 01 19200  |
| ..... .....      | xxxxxxxx 10 38400  |
| 11111111 xx #255 | xxxxxxxx 11 57600  |

Registers map - Input:

| Register number | Quantity  |
|-----------------|---|
| 30003           | RMS of the signal feeding the sensor              |
| 30004           | RMS of the sensor's output signal                 |
| 30005           | counted as (reg300004/reg300003) * 10000 in 0.01% |
| 30010           | printed board temperature in 0.1 °C               |
| 30011           | outer sensor temperature KTY81-210                |
| <b>30006</b>    | <b>measurement for range -10000 do 10000</b>      |

LVDT calibration procedure. 3-point calibration (sensor's core in position : MIN, 0, MAX):

1. Start  
Holding key SW3, turn on device's power supply. Calibration mode will be shown by fast LED blinking STAT2 and single short blink of STAT1.
2. Calibration of 10000 point.  
Set max displacement of sensor's core and press key SW1. End of calibration will be signaled by two short flashes of STAT1.
3. Calibration of 0 point.  
Set sensor's core in half length and press key SW2. End of calibration will be signaled by 3 short flashes of STAT1.
4. Calibration of -10000 point:  
Set sensor's core in min displacement and press key SW3. Calibration point will be written down to memory of the device. WG09 comes back to standard working mode.

For amplifier with 4÷20 mA:

- a. -10000 point is 4 mA,
- b. 10000 point is 20 mA

For amplifier with 0÷10 V

- a. -10000 point is 0V
- b. 10000 point is 10 B
