PRESSURE TRANSDUCERS PXW SERIES

Pressure transducers PXW series are piezo-resistive devices used to measure relative (PXWG) and absolute (PXWA) pressure of liquids, vapours and gases both neutral and chemical aggressive. Measuring ranges are from 0÷100 mbar to 0÷1000 bar. The main application is in measuring and controlling processes.

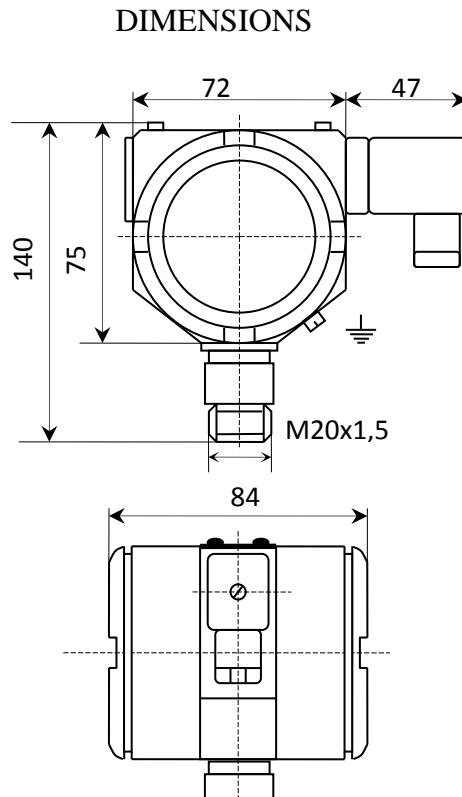

CONSTRUCTION

The basic element of this series is a piezoresistive sensor placed in the case made of stainless steel. Display and electronic board placed in the head converts sensor's signal to standard current or voltage output signal.
